Product Information

Flow Transmitter VHZ

- Ideally suited for viscous media (oils)
- Light and compact construction in an aluminium housing
- For cost-sensitive applications

Characteristics

The VHZ gearwheel flow meter measures the flow by a volumetric principle, in which a pair of gearwheels is moved proportional to the flow rate. The movement of the gearwheels is measured through the enclosing housing wall by a sensor. The devices are suitable for viscous, fluid, self-lubricating media, as well as for aqueous fluids such as soaps, pasts, emulsions etc. which have a non-abrasive character. Because of the volumetric functioning principle, the devices are almost completely independent of viscosity.

A push-pull transistor output, an A / B output or a two wire output are available as signal output.

The push-pull output can as desired be connected as a PNP or an NPN output, and emits a frequency proportional to the flow rate.

The A/B output consists of two push-pull outputs, whose signals are phase-shifted by 90°. This makes it possible to determine the direction of flow using the bidirectionally driven sensor. The 2 wire model represents the pulse as two different currents, and has the advantage of reduced wiring effort.

Alternatively, it is possible to use add-on electronics with signal processing, in the series OMNI, FLEX and LABO.

Technical data

Sensor		gearwheel volumeter				
Nominal v	width	DN 825				
Process of	connection	female thread G ¹ / ₄ G 1				
Metering	ranges	0.02150 l/min for details, see table "Ranges"				
Measurement accuracy		±3 % of the measured value in the specified metering range (measured at 20 mm²/s)				
Repeatab	ility	±0,3 %				
Medium temperature		-25+80 °C (optionally -25+120 °C 2-wire model DN 10-25)				
Ambient temperatu	ıre	-20+70 °C				
Pressure	resistance	see table "Pressure resistance and Weight"				
Pressure	loss	see upstream page "Function and benefits - volumetric, gearwheel"				
Materials medium-c	contact	see table "Materials"				
3 wire or	Supply voltage	1030 V DC				
A / B- output	Current consumption	approx. 20 mA without load				
	Signal output	transistor output "push-pull" (resistant to short circuits and polarity reversal) I _{out} = 100 mA max.				
2 wire	Supply voltage	4.524 V DC				
	Signal output	Low: 7 mA High: 14 mA				
	Reversed polarity protected	yes				
Electrical connection		optional plug DIN 43650-A / ISO 4400 or for round plug connector M12x1, 4-pole				
Ingress protection		IP 65				
Weight		see table "Pressure resistance and weight"				
Conformi	ty	CE				

Pressure resistance and weight

G	Types	PN Housing material		Weight
		bar		kg
G ¹ / ₄	VHZ-008GA	200	Aluminium	0.5
G ¹ / ₄	VHZ-008GK	160	Stainless steel	1.5
G ³ / ₈	VHZ-010GA	200	Aluminium	0.5
G ³ / ₈	VHZ-010GK	200	Stainless steel	1.5
G 3/4	VHZ-020GA	200	Aluminium	1.6
G ³ / ₄	VHZO-020GA	100	Aluminium / glass	1.6
G 1	VHZ-025GA	100	Aluminium	6.3

Seal	FKM	FKM	FKM		
Sight glass	Glass (only with VHZO)				

Wiring

Before the electrical installation, it must be ensured that the supply voltage complies with the data sheet. The use of shielded cabling is recommended.

Push-pull output

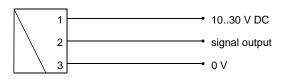

with round plug connector M12x1

Connection example: PNP NPN

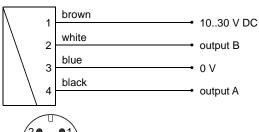

with plug as per DIN 43650-A / ISO 4400

A / B output

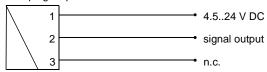

only with 4-pole round plug connector

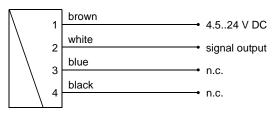

2 wire model

with plug as per DIN 43650-A / ISO 4400

with round plug connector M12x1

Product Information

Handling and Operation

Installation

The VHZ flow measurement device can be installed anywhere in the pipework system. A run-in section is not required. The direction of flow may be freely chosen. It should be ensured that no dirt particles (thread cutting swarf!) can get into the flow space, as this could cause the blockage of the gearwheels. It may therefore be necessary to install filters upstream of the flow measurement device (mesh size 30 μm).
